INNOVATING
FOR OPEN CITIES

what

We are supporting innovators at the local level to develop and test open data-driven solutions that contribute to inclusive, sustainable and thriving open cities in Indonesia. The project starts from March 2016 to February 2017.

why

We believe that open data can be a key enabler for citizen participation, and nowhere is this more true than in cities. When citizens, local government and small businesses all have access to the information that powers decision-making, they can bring their expertise together to tackle urban challenges more quickly and effectively.

how

We incubate individuals and organisations harnessing the power of open data to tackle cities' most pressing challenges.

We won't reinvent any wheels - we only support projects that harness already existing solutions that have the potential to be refined and scaled.

We provide trainings, mentoring from experts, and access to mini-grants.

We provide a space and a platform for activists, social entrepreneurs and civic hackers to come together.
